

Mohammed Ameen Ulla

Engineering Manager | Platform Engineering | Distributed Systems | Growth Platforms

+91-7204069441 | mohammedameen028@gmail.com | Bengaluru

PROFESSIONAL SUMMARY

Engineering Manager with 11+ years of experience building and scaling high-impact platform teams and distributed systems across global media and publishing organizations. Proven track record of leading cross-functional engineering teams, driving platform strategy, and delivering scalable systems that directly influence user growth, engagement, and business outcomes. Experienced in founding and growing teams from 0→1, improving engineering execution, and partnering across Product, Data, Security, and Infrastructure to deliver critical platform initiatives at scale. Strong focus on platform engineering, developer productivity, event-driven architecture, customer preference systems, and engagement platforms. Known for bringing clarity to complex problem spaces, building strong engineering culture, and balancing speed with long-term technical excellence.

WORK EXPERIENCE

Condé Nast Technology Lab | Engineering Manager

Jul 2021 – Present

Lead 3 cross-functional engineering teams across platform engineering, customer preference systems, consent management, and global email/newsletter platforms supporting 30+ brands across 10+ countries.

Leadership & Business Impact

- Founded and scaled the newsletter platform team from 0→1, establishing a core growth platform now responsible for a major share of user acquisition and engagement.
- Delivered 4 consecutive quarters of on-time execution across critical platform programs by improving delivery predictability, stakeholder alignment, and engineering accountability.
- Built strong cross-functional partnerships across Product, Data, Security, Infrastructure, and Marketing to drive platform strategy and execution.
- Mentored engineers across levels and strengthened team capability through clear ownership models, coaching, and engineering quality standards.
- Created operational clarity in high-dependency environments by driving prioritisation decisions, technical trade-offs, and roadmap alignment.

Platform & Technical Leadership

- Architected and delivered a global end-to-end newsletter platform covering onboarding, subscription lifecycle, campaign integration, and delivery workflows at enterprise scale.
- Led migration to Iterable, enabling real-time campaign orchestration, scalable audience segmentation, and improved lifecycle engagement across brands.
- Designed event-driven webhook ingestion architecture using API Gateway, SNS, SQS, and Lambda, significantly improving reliability, scalability, and throughput.
- Built real-time subscription and unsubscription systems with preference sync across the Customer Preference Platform (CPP) and downstream systems.
- Partnered with InfoSec to implement SPF, DKIM, and DMARC, improving email deliverability, compliance, and platform trust.

Key Outcomes

- 2× increase in user engagement driven by newsletter platform initiatives
- 48% of unique user acquisition attributed to newsletter channels
- Built and scaled a new high-impact engagement team from scratch
- Improved engineering delivery consistency across multiple platform programs

Associate Engineering Manager

Oct 2023 - Present

Led the scale-up of the Customer Preference Platform (CPP) as the centralized source of truth for user consent, privacy preferences, and subscriptions across all Condé Nast brands globally.

- Integrated Ethyca for enterprise consent management, ensuring GDPR and CCPA compliance across international markets
- Improved platform reliability, system performance, and developer experience across teams consuming CPP services
- Coordinated execution across product and engineering stakeholders to align roadmap priorities and delivery milestones
- Strengthened platform ownership and operational maturity across privacy and consent systems

Senior Software Engineer (SE2 → SE3)

Jan 2022 - Aug 2023

Built and scaled core platform systems supporting user consent, frontend platform engineering, and global brand delivery.

- Developed and scaled the Customer Preference Platform (CPP) for centralized consent and subscription management
- Owned frontend platform engineering for flagship global brands including Vogue, GQ, and Condé Nast Traveller across 11 international markets
- Architected reusable component libraries and platform standards that improved developer velocity and cross-brand consistency

Full Stack Developer | Meredith Corporation (formerly Time Inc.)

Aug 2015 – Jul 2021

Delivered large-scale platform and subscription systems supporting millions of users across global publishing operations.

- Designed and implemented enterprise data migration pipelines across publishing platforms
- Built operational dashboards for real-time monitoring of migration systems and platform health
- Developed Apple Pay and Android Pay integrations along with subscription management systems for large-scale consumer platforms
- Contributed to Web Enabled Services (WES) powering global publication fulfillment workflows
- Recognized as Star Performer for delivering critical projects on time and within budget

TECHNICAL SKILLS

- **Languages:** JavaScript, Node.js
- **Frontend:** React.js
- **Cloud & Platform:** AWS (API Gateway, SNS, SQS, Lambda), Serverless Architecture
- **DevOps:** CI/CD, Infrastructure as Code, Monitoring & Logging
- **Databases:** MongoDB, MySQL, Elasticsearch
- **Architecture:** Distributed Systems, Event-Driven Systems, Microservices, Platform Engineering

KEY SKILLS

- Team Building & Mentorship
- Platform Strategy
- Distributed Systems
- Cross-functional Stakeholder Management
- Delivery Execution & Prioritization
- Event-Driven Architecture
- Developer Productivity
- Consent & Preference Platforms
- Growth & Engagement Systems

EDUCATION | MIT MYSORE | 2011–2015

Bachelor of Engineering | Information Science & Engineering
